

Groups Of Lie Type And Their Geometries: Como, 1993

by W. M Kantor Lino Di Martino

On Non-Generic Finite Subgroups of Exceptional Algebraic Groups In mathematics, the researcher Sophus Lie initiated lines of study involving integration of differential equations, transformation groups, and contact of spheres that have come to be called Lie theory. For instance, the latter subject is Lie sphere geometry. This article addresses his approach to transformation groups, which is one of Groups of Lie Type and Their Geometries - William M.
